

Building Data-driven Canvas Apps

Agenda

- Screen Design Guidelines
- Displaying Repeating Data using Galleries
- Using Table Functions to Filter and Sort Data
- Updating Data using Edit Forms and Data Cards
- Customizing SharePoint List Forms

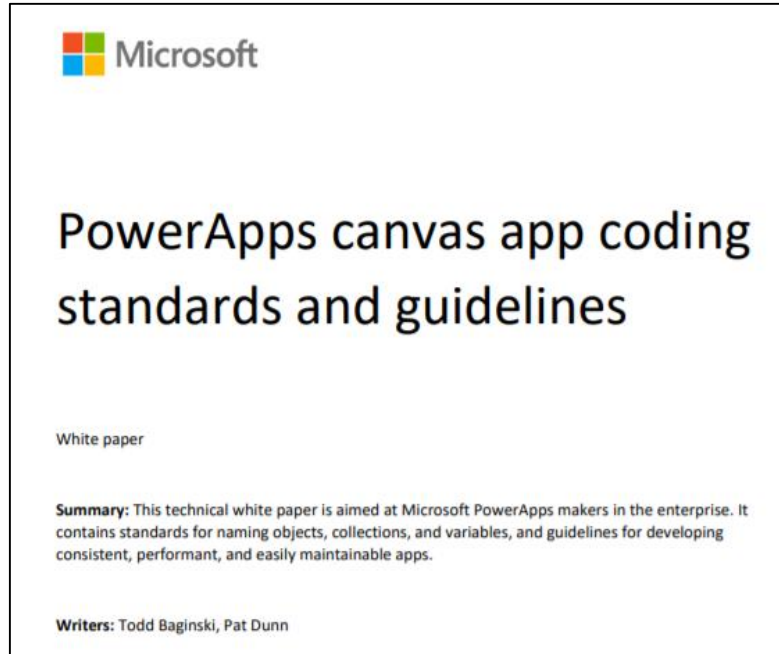

Challenges with Building Canvas Apps

- Who is the typical PowerApps application maker?
 - A developer without a software development background
- What is the maker is responsible for?
 - designing, building, testing, deploying
- What are the challenges in deploying canvas apps?
 - Building projects that are easy to maintain and extend
 - Building consistency across team members
 - Building canvas apps with better performance

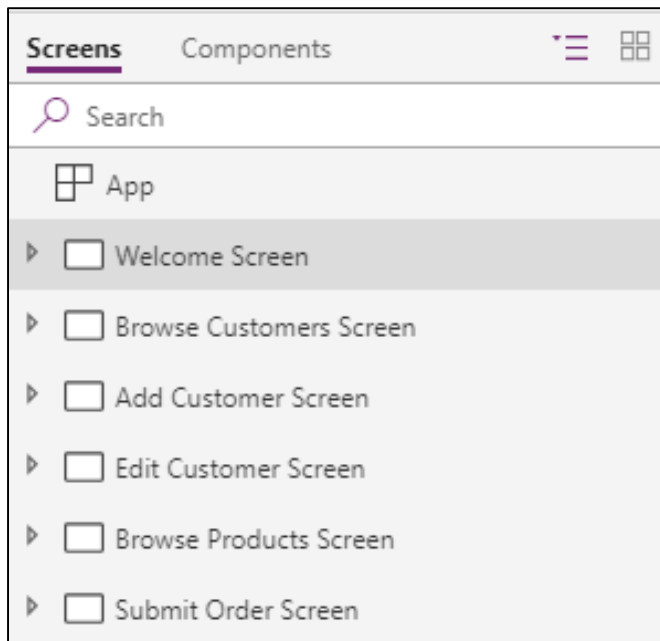

Read the Canvas Apps Whitepaper

- PowerApps canvas app coding standards and guidelines
<https://powerapps.microsoft.com/en-us/blog/powerapps-canvas-app-coding-standards-and-guidelines/>
- As a builder, you should strive for...
 - Simplicity, Readability , Performance, Supportability, Accessibility
 - Ease of deployment and administration

Creating Screen Names

- It's import to create screen names correctly
 - Screen names will be read aloud by screen readers
 - Names should include spaces and avoid abbreviations
 - Screen name should end with the word "Screen"
 - Screen name should reflect purpose of screen

Control Naming

- Control names cannot be duplicated across screens
 - Control names must be unique throughout project
- You should standardize on control naming convention
 - Use prefixes and make control names as self-explanatory

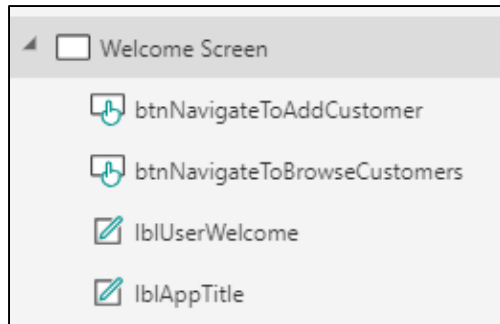

button	btn
camera control	cam
canvas	can
card	crd
collection	col
combo box	cmb
date picker	dte
drop down	drp
radio button	rad
form	frm
gallery	gal

group	grp
header page shape	fdr
html text	html
icon	ico
image	img
label	lbl
page section shape	sec
shapes (rectangle, etc.)	shp
table data	tbl
text input	txt
timer	tim

Keeping Screens Maintainable

- Each control name should be easy to read & understand

- Use grouping to isolate set of controls with single purpose

Expanded Group

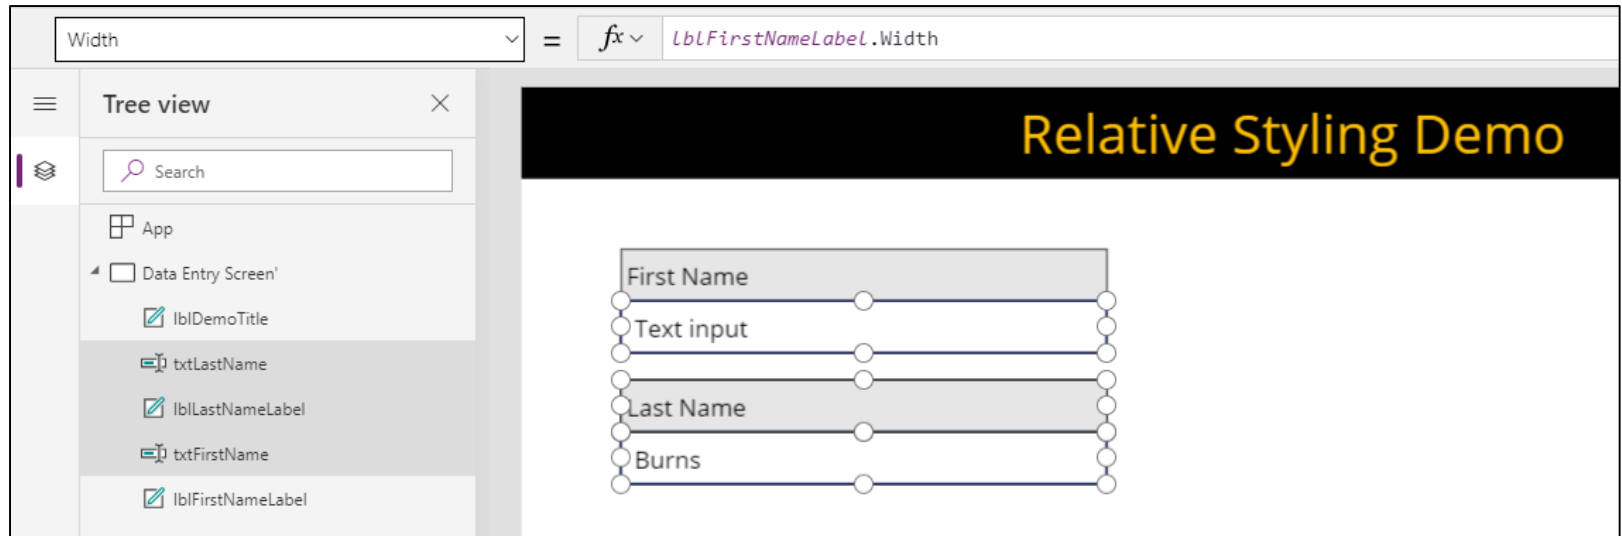

Collapsed Group

Relative Styling

- Calculate control property values from other controls
 - Common to use properties like X, Y, Width, Height, Size, Fill, etc.

Agenda

- ✓ Screen Design Guidelines
- Displaying Repeating Data using Galleries
 - Using Table Functions to Filter and Sort Data
 - Updating Data using Edit Forms and Data Cards
 - Customizing SharePoint List Forms

Displaying Repeating Items using Galleries

- Galleries are used to display repeating items
 - A list of customers

- A set of command buttons

- A products list and a shopping cart

	Batman Action Figure A super hero who sometimes plays the role of a dark knight.	Quantity 1	ADD TO CART
	Captain America Action Figure A super action figure that protects freedom and the American way of life.	Quantity 1	ADD TO CART
	GI Joe Action Figure A classic action figure from the 1970s.	Quantity 1	ADD TO CART
	Green Hulk Action Figure An overly muscular action figure that strips naked when angry.	Quantity 2	ADD TO CART

Shopping Cart for Lionel Witt			
No	Product	List Price	Total
1	Batman Action Figure	\$14.95	\$14.95
2	Green Hulk Action Figure	\$9.95	\$19.90
10	Twitter Follower Action Figure	\$1.00	\$10.00

Creating Lists in SharePoint Online

- PowerApps works best with modern lists
 - Best to create lists from the Custom list type

- Add site columns to track required data

Customers			
Last Name ▾	First Name ▾	Company ▾	E-Mail ▾
Smith	John	Some Company	SomeEmail@SomeDomain.com
Doe	Jane	Doe Consulting	janedoe@geemail.com

Creating galCustomers

- Create a gallery to display customers
 - **galCustomers** created as a vertical gallery
 - **Items** property references **Customers** list in SharePoint
 - **WrapCount** property set to 3 to display three customers per row
 - Item template designed to display customer data
 - Item template designed to provide customer-specific actions

 Gaston Knight    email: Gaston.Knight@LucernePublishing.com phone: 1(801)333-3333	 Elvis Knight    email: Elvis.Knight@DoublemeatPalace.com phone: 1(505)111-2222	

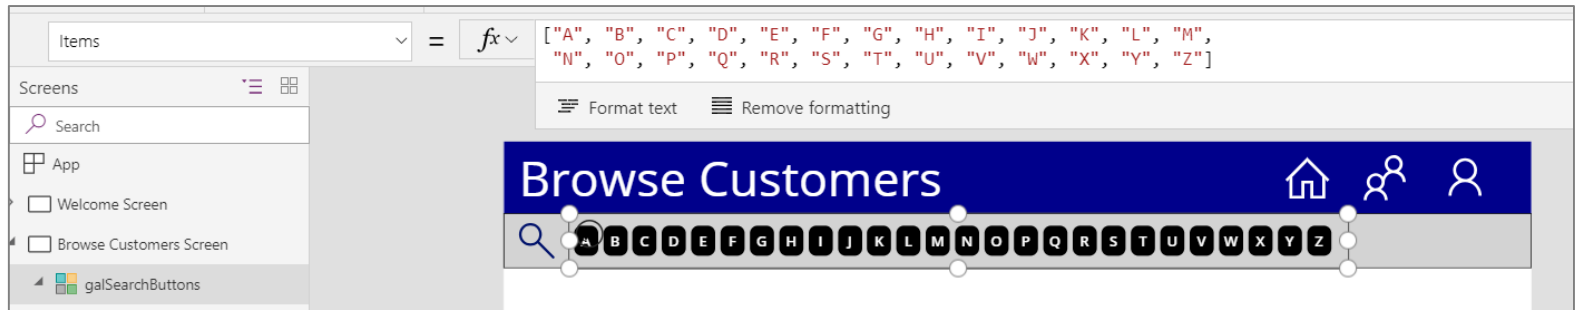

Agenda

- ✓ Screen Design Guidelines
- ✓ Displaying Repeating Data using Galleries
- Using Table Functions to Filter and Sort Data
 - Updating Data using Edit Forms and Data Cards
 - Customizing SharePoint List Forms

Creating galSearchButtons

- Create a search toolbar
 - Assign table of letters to **Items** property of **galSearchCustomers**

- Use **ThisItem.Value** for **Text** property of button inside gallery template

Creating a Search Filter

- Assign filter string to local context variable

- Configure expression for **Items** property to set filtering

```
If(  
    IsBlank(locCustomerFilter),  
    Sort(Customers, 'Last Name'),  
    Sort(Filter(Customers, StartsWith('Last Name', locCustomerFilter)), 'Last Name')  
)
```

DEMO

Filtering Data in a Table

Agenda

- ✓ Screen Design Guidelines
- ✓ Displaying Repeating Data using Galleries
- ✓ Using Table Functions to Filter and Sort Data
- Updating Data using Edit Forms and Data Cards
- Customizing SharePoint List Forms

Working with Edit Forms and Data Cards

- Form acts as a container for data cards
 - Each form binds to a single record
 - Within a form, each data card binds to an underlying field
 - Each data card contains an encapsulated set of child controls

The screenshot displays a Visual Studio IDE window titled 'frmAddCustomer'. On the left, a 'Solution Explorer' pane lists the following data cards and screens:

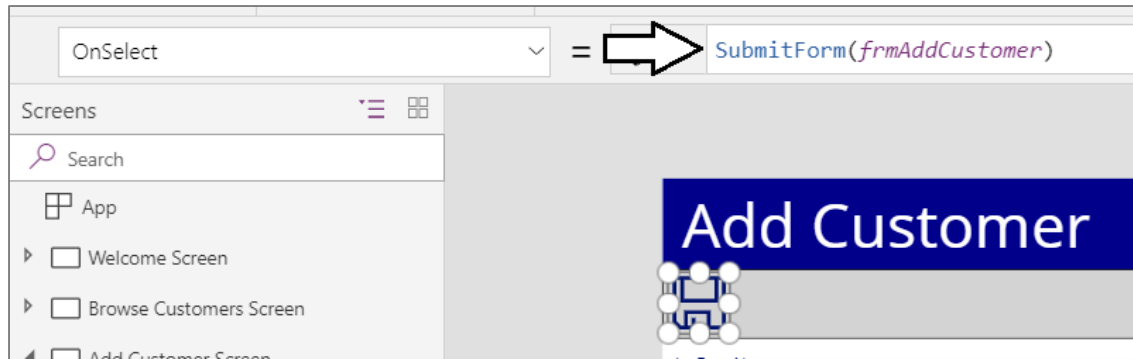

- First Name_DataCard1
- Last Name_DataCard1
- Company_DataCard1
- Email Address_DataCard1
- Work Phone_DataCard1
- Home Phone_DataCard1
- Address_DataCard1
- City_DataCard1
- State_DataCard1
- Zipcode_DataCard1
- Edit Customer Screen
- Browse Products Screen
- Submit Order Screen
- Order Confirmation Screen

On the right, a visual representation of the form layout is shown. It features a grid of text boxes arranged in two columns. The left column contains text boxes for 'First Name', 'Company', 'Work Phone', 'Address', and 'State'. The right column contains text boxes for 'Last Name', 'Email Address', 'Home Phone', 'City', and 'Zipcode'. Each text box is preceded by an asterisk (*) indicating a required field. The form is enclosed in a rectangular frame with corner handles for resizing.

Form Submission with Edit Forms

- Update with Edit Form triggered by calling **SubmitForm**

- Submit button should be disabled when form data is not valid

Custom Form Validation with Edit Forms

- Data cards contain label control for error message

- Set **Text** property of label to display error message

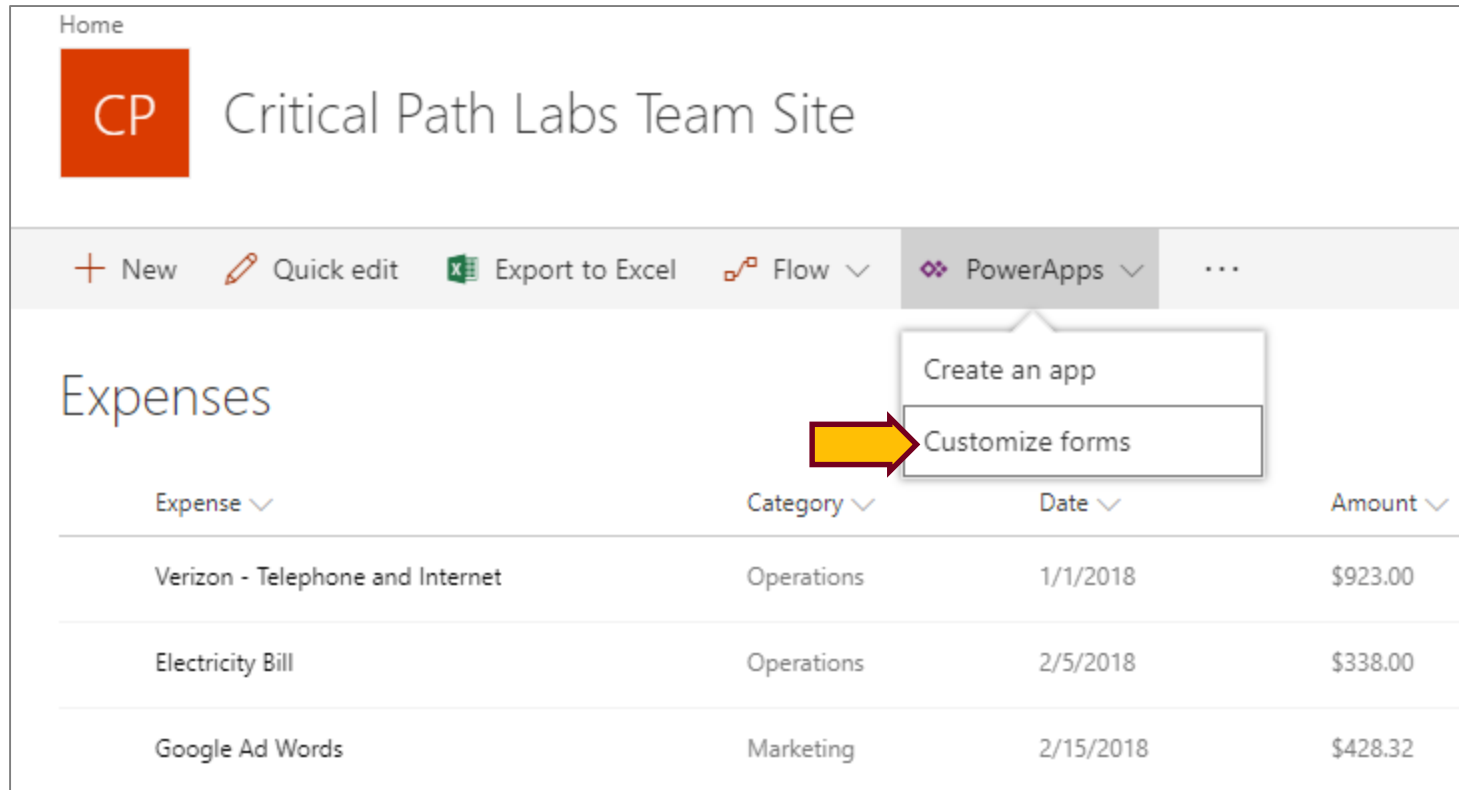

Agenda

- ✓ Screen Design Guidelines
- ✓ Displaying Repeating Data using Galleries
- ✓ Using Table Functions to Filter and Sort Data
- ✓ Updating Data using Edit Forms and Data Cards
- Customizing SharePoint List Forms

Customizing SharePoint List Forms

- Modern SharePoint lists allow forms customization
 - Customized SharePoint lists provide custom UI using canvas apps

The screenshot shows the 'Critical Path Labs Team Site' with a list titled 'Expenses'. The list has columns: Expense, Category, Date, and Amount. The 'PowerApps' button in the top bar is highlighted, and its dropdown menu is open, showing 'Create an app' and 'Customize forms'. A yellow arrow points to the 'Customize forms' option.

Expense	Category	Date	Amount
Verizon - Telephone and Internet	Operations	1/1/2018	\$923.00
Electricity Bill	Operations	2/5/2018	\$338.00
Google Ad Words	Marketing	2/15/2018	\$428.32

Customizing the Form

- SharePoint list data passed in connection

The screenshot displays the Microsoft PowerApps editor interface. At the top, the 'PowerApps' logo is visible. Below it, a navigation bar includes 'Back to SharePoint', 'File', 'Insert', 'View' (selected), 'Action', and 'Home'. A secondary bar shows 'Data sources', 'Media', 'Collections', 'Variables', and 'Advanced'. The main workspace is divided into three panels:

- Left Panel (Screens):** A tree view showing the project structure. It includes 'SharePointIntegration', 'FormScreen1', and 'SharePointForm1' (selected). Under 'SharePointForm1', there are several data cards: 'ID_DataCard1', 'Amount_DataCard1', 'Date_DataCard1', 'Title_DataCard1', and 'DataCard2'.
- Center Panel (Form Design):** A visual representation of the form. It has a yellow header with the text 'This is a Custom Form'. Below the header, there are input fields for 'Expense' (containing 'Verizon - Telephone and Internet'), 'Category' (a dropdown menu with 'Operations' selected), 'Date' (containing '1/1/2018'), and 'Amount' (containing '923').
- Right Panel (Properties):** A panel for configuring the selected form. It has tabs for 'Properties', 'Rules', and 'Advanced'. The 'Properties' tab is active, showing settings for 'SharePointForm1'. The 'Data' section shows the data source as 'Expenses' (a SharePoint list). The 'Layout' section shows the form is set to 'Vertical'. The 'Default mode' is set to 'Edit'. The 'Position' and 'Size' sections show the form's dimensions (X: 0, Y: 60, Width: 444, Height: 730). The 'Color' and 'Border' sections show the form's styling. The 'Visible' property is set to 'On'.

Below the 'Properties' panel, there is a 'Fields' section that lists the fields from the 'Expenses' list. The fields are: 'ID' (value 123), 'Expense' (value abc), 'Category' (value Operations), 'Date' (value 1/1/2018), 'Amount' (value 923), and 'Modified' (value 1/1/2018). Each field has a checkbox to select it and a dropdown menu to choose its display format.

Saving the Customized Form

- Canvas app is saved back into SharePoint site
