

# PowerApps ALM using Managed Solutions

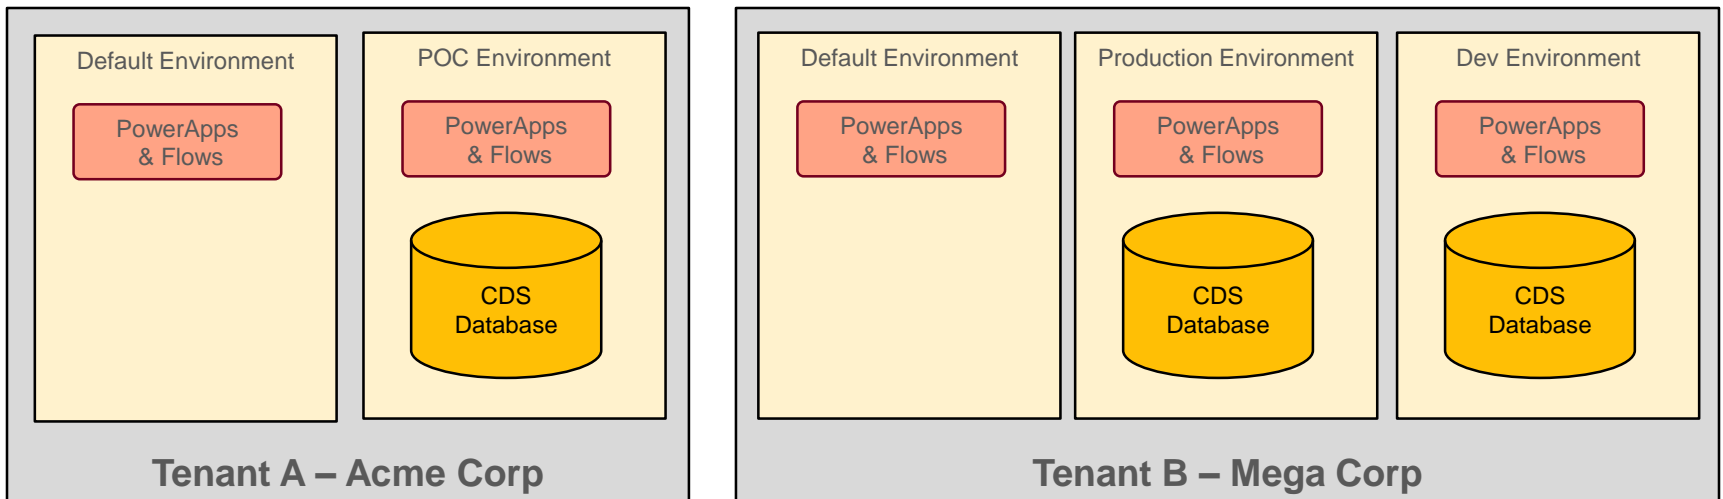

# Agenda

- Understanding Environments and DLP Policies
- Single-environment ALM Strategies
- Exporting and Importing Canvas Apps and Flows
- Understanding Publishers and Solutions
- Exporting and Importing Solutions
- ALM using Managed Solutions

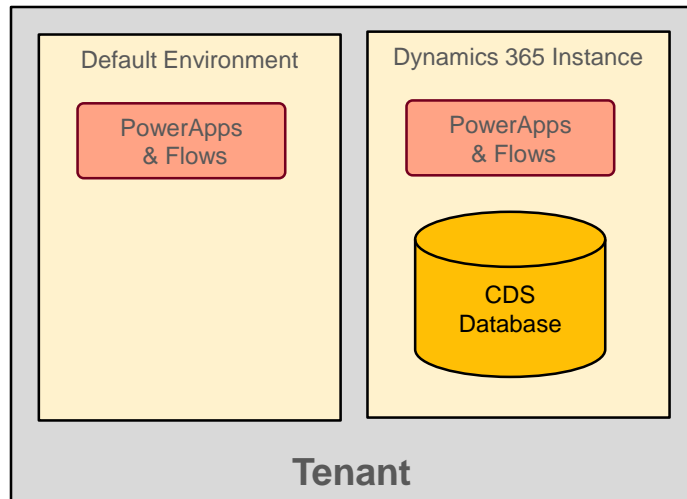

# What is an Environment?

- Environment is container for PowerApps, Flow and CDS database
  - Each environment and its resources exist within a geographic region
  - Environment resources include PowerApps, Flows and CDS database
  - Environment represents a governance and security boundary
  - Every tenant is provisioning with a default environment
  - New environment can be provisioned with or without a CDS database

# PowerApps and Dynamics 365 Convergence

- As of Dynamics 365 version 9
  - Dynamics 365 instance = PowerApps Environment with CDS DB

# Managing Environments

- Environments managed in PowerApps Admin Center
  - You can view existing environments and configure security and access
  - You can create new environments
  - When creating an environment, you can optionally include CDS database

# Environmental Regions

- Environment is created in specific region
  - You can choose at create time
  - All app components and CDS DB stored in region

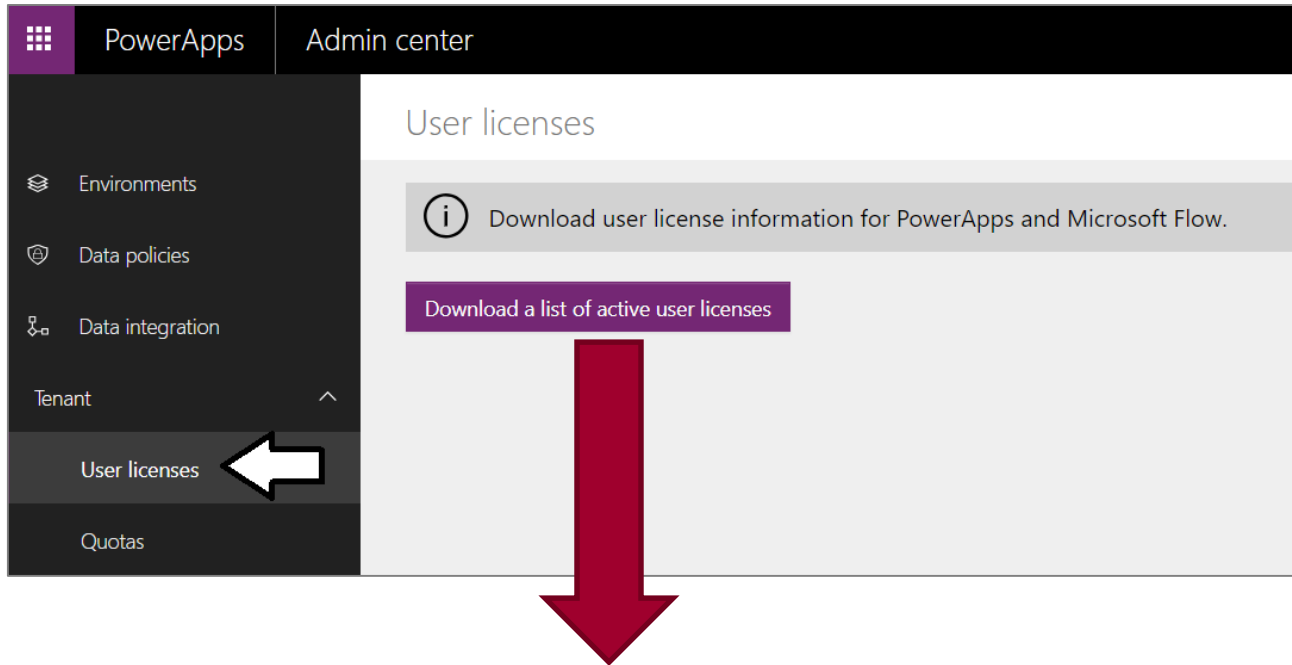

- Issues to consider when creating environment
  - Create environment close to where users are located
  - Create environment in region required for data residency

# Viewing User Licenses

	A	B	C	D	E	F
1	User Name	Email Address	Service	License	License Assigned Date	Is Trial
2	Stu Dent	student@pbibc0820.onmicrosoft.com	PowerApps Plan 2	Microsoft PowerApps Plan 2	8/23/2018 13:23	FALSE
3	Stu Dent	student@pbibc0820.onmicrosoft.com	Flow for Office 365	Office 365 Enterprise E5	8/18/2018 22:21	FALSE
4	Stu Dent	student@pbibc0820.onmicrosoft.com	Flow Free	Microsoft Flow Free	8/23/2018 18:13	TRUE
5	Stu Dent	student@pbibc0820.onmicrosoft.com	Flow Plan 2	Microsoft PowerApps Plan 2	8/23/2018 13:23	FALSE
6	Stu Dent	student@pbibc0820.onmicrosoft.com	PowerApps for Office 365	Office 365 Enterprise E5	8/18/2018 22:21	FALSE
7	James Bond	jamesb@pbibc0820.onmicrosoft.com	PowerApps Plan 2	Microsoft PowerApps Plan 2	8/24/2018 18:29	FALSE
8	James Bond	jamesb@pbibc0820.onmicrosoft.com	Flow for Office 365	Office 365 Enterprise E5	8/21/2018 17:38	FALSE
9	James Bond	jamesb@pbibc0820.onmicrosoft.com	Flow Plan 2	Microsoft PowerApps Plan 2	8/24/2018 18:29	FALSE
10	James Bond	jamesb@pbibc0820.onmicrosoft.com	PowerApps for Office 365	Office 365 Enterprise E5	8/21/2018 17:38	FALSE

# Types of Environments

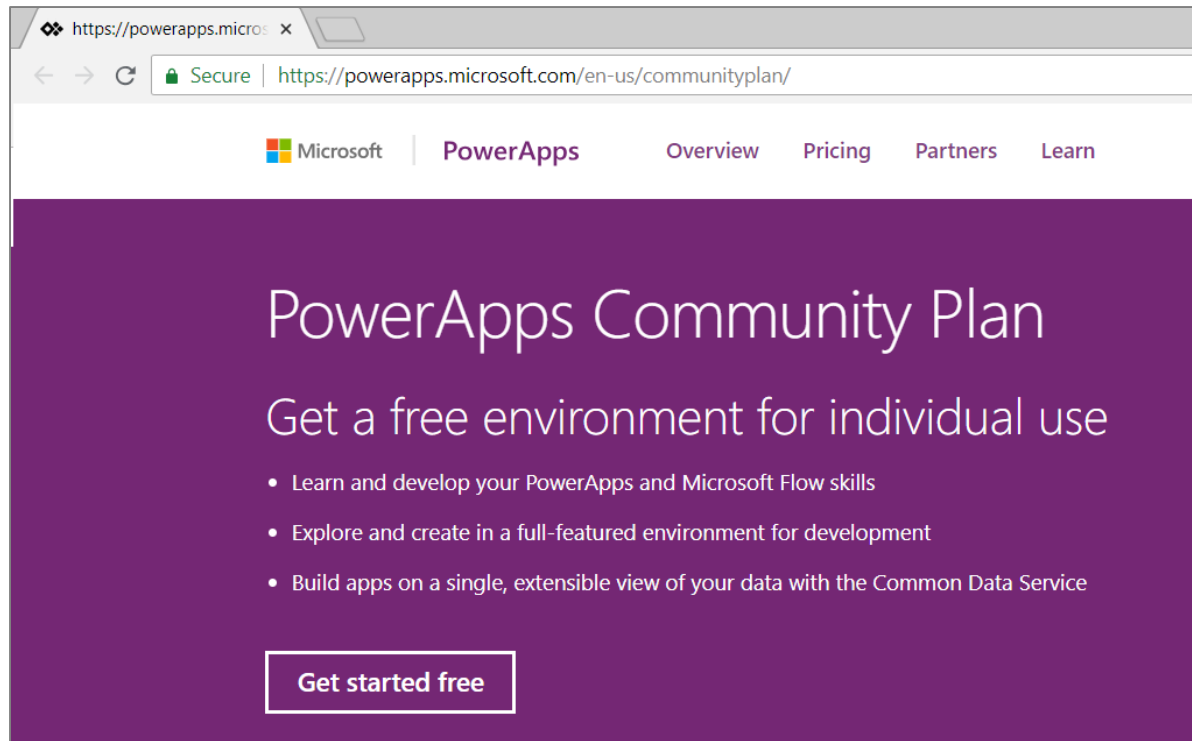

- Production
  - used for permanent work in an organization
- Default
  - Special type of production environment
- Sandbox
  - Non-production environment with environment reset feature
- Trial
  - Temporary environment used to support short term testing
- Developer
  - Environment created with the Community Plan license
  - Only supports a single user

# PowerApps Community Plan

- PowerApps Community Plan offers free environment
  - Used to build solutions for PowerApps, Flows and CDS for Apps
  - Environment only allows for a single user
  - Sign up at <https://powerapps.microsoft.com/en-us/communityplan/>

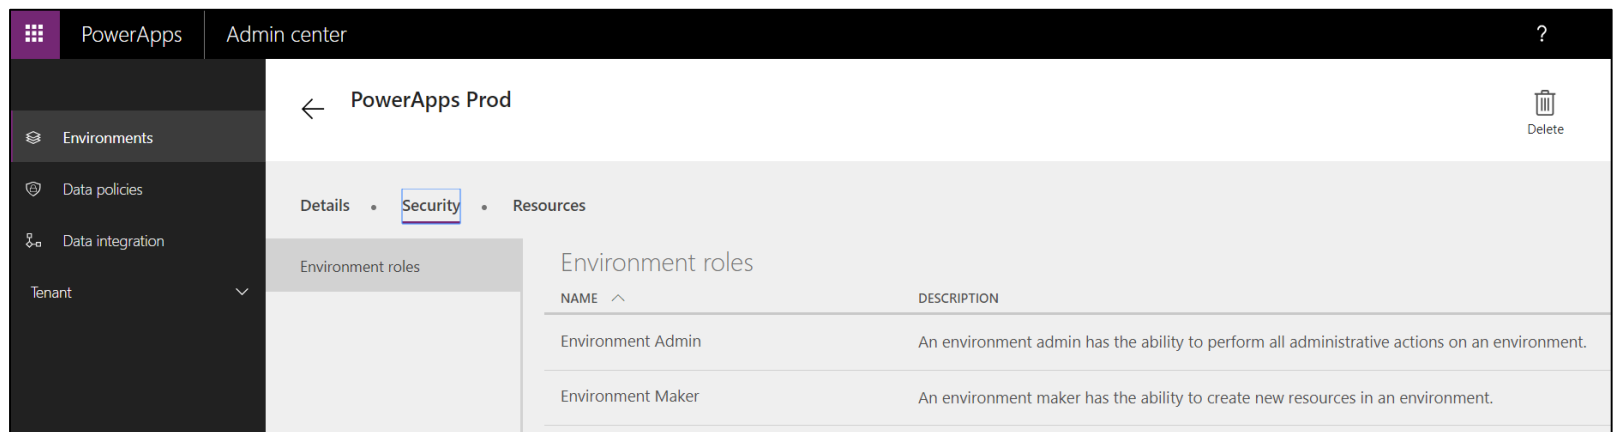

# Default Environment

- Each tenant has default environment created in nearest Azure region
  - Default environment can't be disabled or deleted
  - Default environment automatically adds all tenant users to maker role
  - You can't remove users from maker role of default environment
  - Default environment provides self-service app & flow building to all licensed users
- Default environment does not yet support adding CDS database
  - Microsoft plans to eventually remove this limitation
- Default environment currently only place you can create gateway
  - Therefore, default environment only place to access on-premises data
  - Microsoft plans to eventually remove this limitation

# Environment Security Roles (No CDS)

- Environment Administrator
  - Manage environment by adding/removing users
  - Creating the CDS database instance
  - Viewing and managing all resources in environment
  - Configure Data Loss Prevention policies
- Environment Maker
  - Create and share canvas apps and flows
  - Create and share connections and custom connectors
  - Create gateways and build connections through gateways

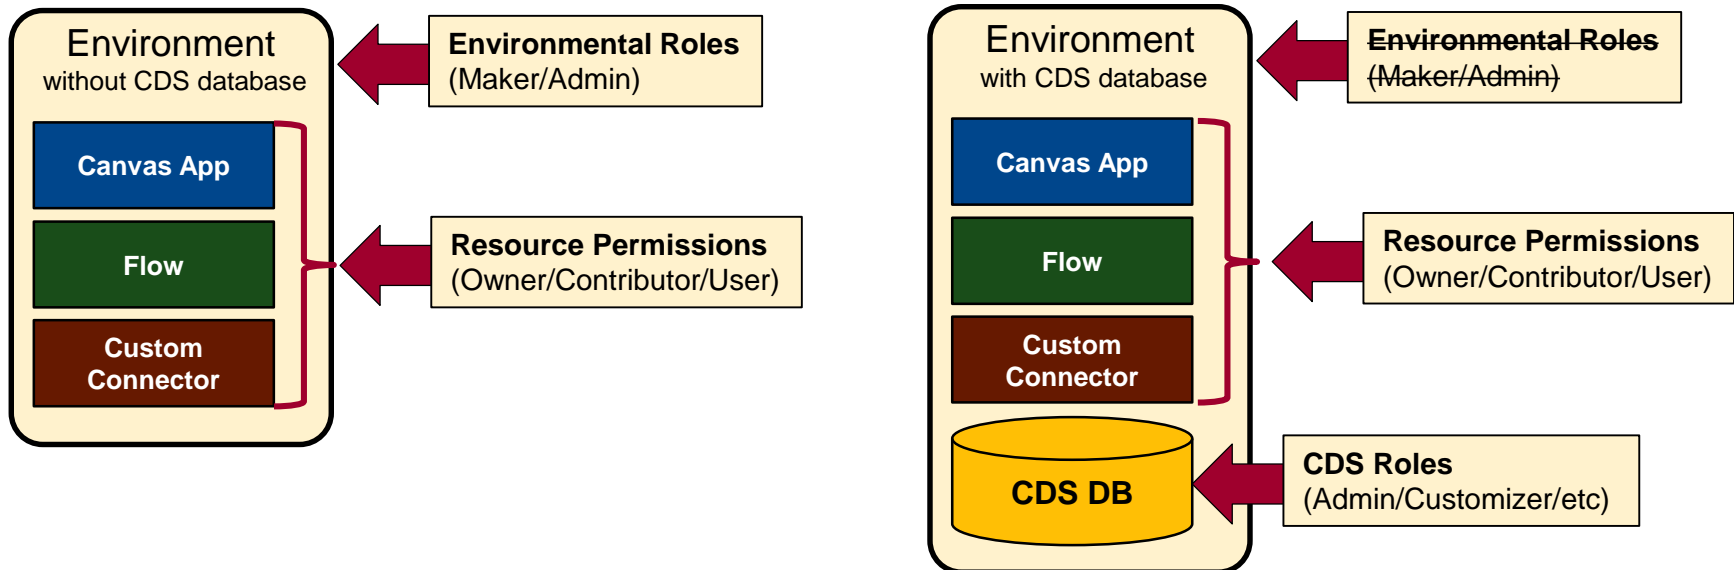

The screenshot shows the PowerApps Admin center interface. The top navigation bar includes 'PowerApps' and 'Admin center'. The left sidebar lists 'Environments', 'Data policies', 'Data integration', and 'Tenant'. The main content area is for 'PowerApps Prod' and shows the 'Security' tab selected. Under 'Environment roles', there is a table with two roles: 'Environment Admin' and 'Environment Maker'.

NAME	DESCRIPTION
Environment Admin	An environment admin has the ability to perform all administrative actions on an environment.
Environment Maker	An environment maker has the ability to create new resources in an environment.

# CDS Security Roles

- Environment requires CDS database to support...
  - Using and customizing standard entities
  - Creating custom entities
  - Creating model-driven applications
- Environment with CDS database has different security model
  - Security model switches from Environment roles to CDS roles

# CDS Database Roles

- System Administrator
  - Environment Admin promoted to System Administrator
  - Complete ability to customize and administer environment
  - Full read-write access to data in the database.
- System Customizer
  - Full permission to customize the environment
- Environment Maker
  - Create new apps, connections, gateways and flows
- Common Data Service User
  - Ability to run apps but no ability to customize the system
  - This role is commonly copied to make custom security roles
- Delegate
  - Special role to give a user permission to Act on behalf of another user

# Agenda

- ✓ Understanding Environments
- Configuring Data Loss Prevention Policies
  - Sharing and Versioning Canvas Apps and Flows
  - Exporting and Importing Canvas Apps and Flows
  - Installing and Configuring an On-Premises Data Gateway
  - Packaging and Deploying Custom Solutions

# Data Loss Prevention Policies

- **Data is critical in an organization's success**
  - It needs to be readily available for decision-making
  - Needs to be protected so it's not shared with audiences that should not have access to the data
- **Data Loss Prevention (DLP) Policies**
  - PowerApps provides a way to protect your data by providing the ability to create and enforce policies
  - You can define which consumer services/connectors specific business data may be shared with

# Data Loss Prevention (DLP) Policies

- DLP policies determine of what connectors can be used
  - Allowed connectors configured as **Business data only**
  - Disallowed connectors classified as **No business data allowed**

Data Policy Name Wingtip Production Environment Policy ✓ Save Policy ✕ Close

Environments • Data groups

Categorize these connectors into one of two data groups, "Business data only" and "No business data allowed". Users will be prevented from creating flows and apps that combine connectors from the "Business data only" and "No business data allowed" data groups. [Learn more](#)

**Business data only** ...

Add Excel Online (Business) SQL Server SharePoint OneDrive for Business

**No business data allowed (Default)**

Add PowerApps for Admins Power platform for Admins Dynamics 365 Salesforce

## Error

Using these connections together conflicts with the company data loss prevention policies. Click [here](#) to learn more.

Ok

# Agenda

- ✓ Understanding Environments
- ✓ Configuring Data Loss Prevention Policies
- Sharing and Versioning Canvas Apps and Flows
  - Exporting and Importing Canvas Apps and Flows
  - Installing and Configuring an On-Premises Data Gateway
  - Packaging and Deploying Custom Solutions

# Configuring User Access to Apps & Flows

- Sharing apps differs between these scenarios
  - App is a canvas app
  - App is a model-driven app
- For canvas apps
  - Shared with users, Azure AD Groups or entire org
- For model-driven apps
  - Shared by adding user to a CDS security role

# Sharing PowerApps

- There are 3 level of app permissions:
  - **Can Use:** Users/groups can run the app but cannot edit or share the app
  - **Can Edit:** Users/groups can run, edit publish and share the app
  - **Owner:** Can Edit permission + ability to add other contributors

The screenshot shows the 'Share' tab for a PowerApp named 'SP Photo'. At the top, it indicates 'Created: 08/24/2018' and 'Modified: 08/24/2018'. Below the tabs (Details, Share, Versions, Settings, Analytics (preview)), a message states 'Version 1 is published.' A text input field prompts 'Enter names, email addresses, or user groups'. Below this is a button '+ Add everyone in my org' with a help icon. A checkbox 'Send an email invitation (optional)' is checked. The 'Shared with' section contains a table with three users: Stu Dent (Owner), Austin Powers (Can use), and Carrie Mathison (Can edit). Each row includes a profile picture, name, email, and a permission dropdown with a close button. At the bottom are 'Cancel' and 'Save' buttons.

Name	Email	Permission
Stu Dent	student@pbibc0820.onmicrosoft.com	Owner
Austin Powers	AustinP@pbibc0820.onMicrosoft.com	Can use
Carrie Mathison	CarrieM@pbibc0820.onMicrosoft.com	Can edit

# Sharing a Flow

## Owners

Adding another owner allows others to edit, update and delete this flow. All owners can also access the run history and add or remove other owners.

[Learn more](#)

## Add a user or group as owner

Enter names, email addresses, or user groups

Maxwell Smart  
MaxwellIS@pbibc0820.onmicrosoft.com

## Embedded connections

Everyone listed as an owner will have access to all these connections and will only be able to use them in this flow.

[Learn more](#)

## Connections Used

Owners of the flow will have full access to all connections in the flow and the content within the connected accounts. Owners are not required to add connections to their own accounts, and can take any actions in existing connections and their content.

SharePoint  
student@pbibc0820.onmicrosoft.com

Owners with access to this connection can:  
Read list and library names, as well as the names of the columns  
Create, read, update, copy and delete files and metadata  
Create, read, update, and delete list items

Only add owners to a flow if you wish to share full access to all connections and the content within them. If you want to have someone else edit a flow offline without granting access to connections, you can export your flow. [Learn more](#)

# Application Players

- Application players used by consumers to run apps
  - Can be used to run both canvas apps or model-drive apps
  - Apps available to user discovered at **web.powerapps.com**
  - Dynamics 365 users see apps at **home.dynamics.com**
- Application players available for install on mobile devices
  - Currently, there are separate apps for canvas and model-driven
  - Microsoft plans single app for canvas and model-driven in future

# App Versioning in PowerApps

- PowerApps keeps version history for apps saved to cloud
  - Accessible via <https://web.powerapps.com>
  - Restore, delete, and publish versions

Details	•	Share	•	<u>Versions</u>	•	Settings

# Exporting a Flow

The screenshot displays the Microsoft Flow (Power Automate) interface. A list of flows is shown on the left, including "Upload to SP Photos", "Proposal Approval Process", "Idea Tracker", and "My New Flow 123". The "My New Flow 123" flow is selected, and its context menu is open. The menu options are: "Run now", "Save As", "See analytics", "Submit as template", "Export", and "Delete". The "Export" option is highlighted with a large black arrow. To the right of the "Export" option, a sub-menu is visible with two options: "Package (.zip)" and "Logic Apps template (.json)". The "Package (.zip)" option is highlighted with a large black arrow. A small black arrow points to the three-dot menu icon in the top right corner of the flow's header area.

Flow Name	Last Modified
Upload to SP Photos	3 days ago
Proposal Approval Process	3 days ago
Idea Tracker	3 days ago
My New Flow 123	3 days ago

- Run now
- Save As
- See analytics
- Submit as template
- Export
- Delete

- Package (.zip)
- Logic Apps template (.json)

# Outbound Ports – On-Premises Gateway

- Gateway communicates through outbound ports
  - Gateway does not require inbound ports

Domain names	Outbound ports	Description
*.powerbi.com	443	HTTPS
*.analysis.windows.net	443	HTTPS
*.login.windows.net	443	HTTPS
*.servicebus.windows.net	5671-5672	Advanced Message Queuing Protocol (AMQP)
*.servicebus.windows.net	443, 9350-9354	Listeners on Service Bus Relay over TCP (requires 443 for Access Control token acquisition)
*.frontend.clouddatahub.net	443	HTTPS
*.core.windows.net	443	HTTPS
login.microsoftonline.com	443	HTTPS
*.msftncsi.com	443	Used to test internet connectivity if the gateway is unreachable by the Power BI service.

# Using a Gateway to Create a Connection

The screenshot displays the PowerApps interface with the 'Teds GW' gateway configuration page on the left and a modal for creating a new connection on the right.

**PowerApps Interface (Left):**

- Navigation pane: Home, Learn, Apps, Data, Entities, Picklists, Connections, Custom connectors, Gateways, Business logic, Notifications.
- Header: PowerApps, Environment: Critical.
- Section: Teds GW
- Tabs: Details, Users, Connections.
- Search bar: Enter names, email addresses, or user groups.
- Buttons: + Add everyone in my org, ?
- Text: This gateway is currently shared with
- Table of users sharing the gateway:

Name	Email
Stu Dent	student@pbibc0820.onmicrosoft.com
Maxwell Smart	MaxwellS@pbibc0820.onmicrosoft.com
Emma Peel	EmmaP@pbibc0820.onmicrosoft.com

- Section: Gateway permissions for Maxwell Smart

  - ☒ DB2
  - ☒ File System

**Modal: SQL Server (Right):**

- Icon: SQL Server Microsoft
- Display name \*: WingtipSalesDB ODYSSEUS
- How do you want to connect to your data?
  - ☐ Connect directly (cloud-services)
  - ☒ Connect using on-premises data gateway ?
- SQL server name \*: ODYSSEUS
- SQL database name \*: WingtipSalesDB
- Authentication Type: Windows
- Username \*: CptStudent
- Password \*: .....
- Choose a gateway \*: Teds GW
- Buttons: Cancel, Save

# On-Premises Data Gateway

- On-Premises Gateway required to access on-premises data
  - Gateway used by Power BI, PowerApps, Flow and Logic Apps
  - Download installer: <http://go.microsoft.com/fwlink/?LinkID=820931>

The screenshot shows the PowerApps portal interface. On the left is a navigation pane with options: Home, Learn, Apps, Data (selected), Entities, Picklists, Connections, Custom connectors, and Gateways. The main area displays the 'Teds GW' gateway configuration. The 'Connections' tab is active, showing a table of connections. The table has columns for NAME, TYPE, and MODIFIED. One connection is listed: 'WingtipSalesDB ODYSSEUS SQL Server' with type 'On-premises' and modified '2 d ago'. There are also icons for information and more options for this connection.

NAME	TYPE	MODIFIED
WingtipSalesDB ODYSSEUS SQL Server	On-premises	2 d ago

# Agenda

- ✓ Understanding Environments
- ✓ Configuring Data Loss Prevention Policies
- ✓ Sharing and Versioning Canvas Apps and Flows
- ✓ Exporting and Importing Canvas Apps and Flows
- ✓ Installing and Configuring an On-Premises Data Gateway
- Packaging and Deploying Custom Solutions

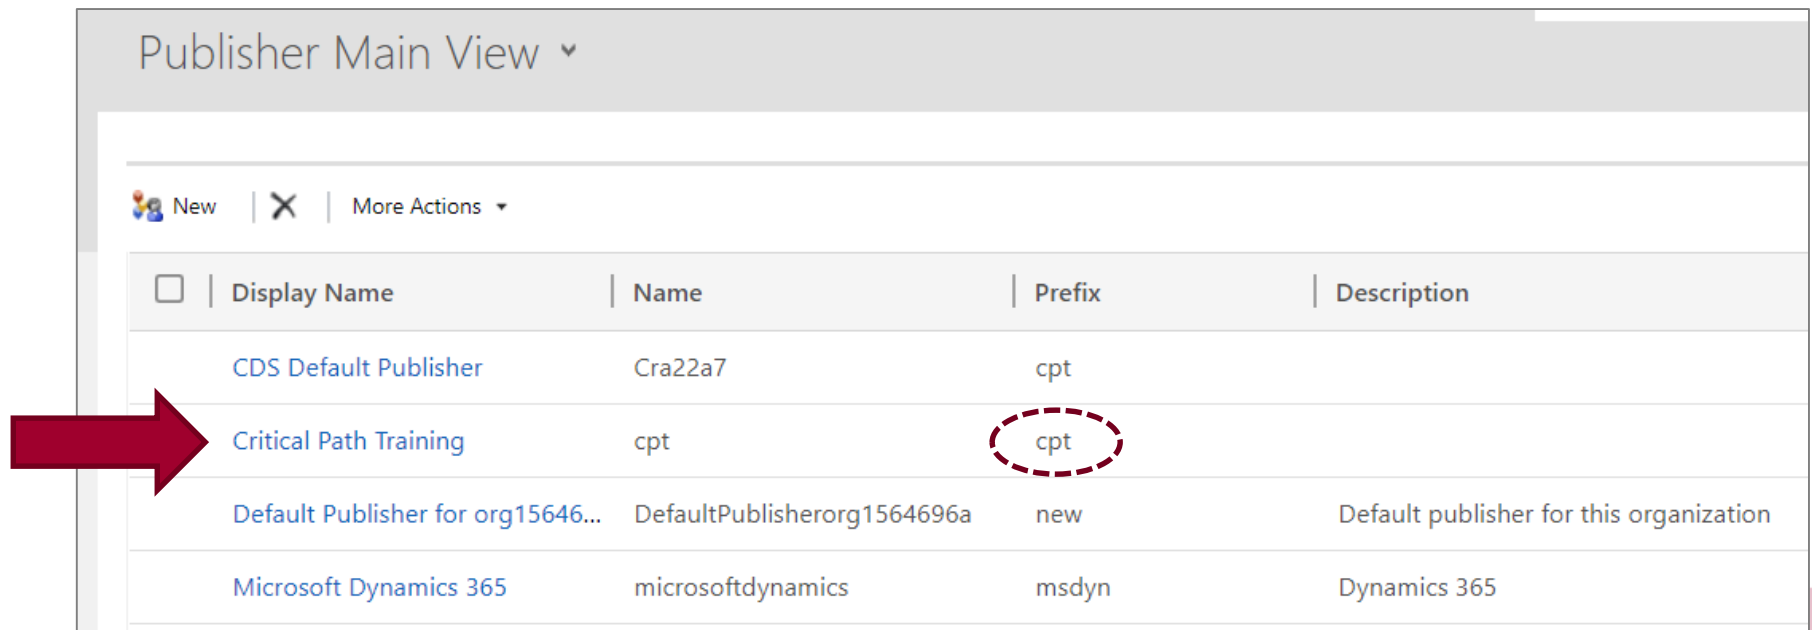

# Introduction to Solutions

- Solutions used to move configuration between environments
  - Solutions used to move metadata (e.g. custom entity, model-driven apps)
  - Solutions not used to move business data itself
- Solutions can be managed or unmanaged
  - Unmanaged solutions is "open" solution which allows changes
  - Managed solutions are locked down and do not allow changes.
  - During development, you work with an unmanaged solution
  - When you export solutions, export is created as managed or unmanaged
- When you import a managed solution, it is in lockdown mode
  - You cannot modify or remove application components or customization
  - Managed solution is serviceable and upgradable
  - Uninstalling managed solution removes everything

# Publishers and Solutions

- CDSA solutions used to distribute applications
  - Provides means to conduct ALM
- CDSA Publishers
  - Profile used to provide identity for CDSA solutions
  - You should create new publisher when distributing solutions

Publisher Main View ▾

Critical Path CDSA Demo	...	1/31/2019	1.0.0.0
Common Data Services Default Solution	...	1/26/2019	1.0.0.0
Default Solution	...	1/26/2019	1.0

# Adding Solution Components

# Solution Explorer

- Solution Explorer provides top-level view of customizations
  - Can be challenging to find in current UI experience

# Solution Packager

- Used to store the solution zip components in organized folder structure
- Make source control and differencing much easier
- Allows for both unmanaged and managed files to be in source control

## Solution zip file contents

## Solution Packager Structure

# Installing Solutions

- Solutions can depend on other solutions
  - You can't install solution until you install dependencies
- How do you install solutions?
  - Solution Manager
  - Package Deployer tool
- Package deployer tool
  - can be run interactively
  - can be run from PowerShell
  - can be run by installing from AppSource marketplace

# Installing Unmanaged Solutions

- When you import an unmanaged solution...
  - changes merged in with other unmanaged changes
  - Unmanaged solutions cannot be removed as a unit
  - Merged changes removed by manually removing items
  - administrator must publish unmanaged changes to have any non-schema (e.g. display labels) changes be visible to other users

# Summary
